

How to measure your kitchen.

Kick off your kitchen journey by sending us a drawing of your space with measurements. This will really help when we start working together on a design for your new kitchen. We will be able to provide you with layout options and a detailed price. Here are some great tips for measuring and space planning.

Step 1

To begin, you will need

- paper
- tape Measure
- Pencil/Pen
- Draw a simple sketch your room as a box

Step 2

Make a note of any openings in your room – knowing where doors, windows and archways are will help us get your design just right. Tell us where any sewer pipes, hot water systems, electrical meters, gas meters, fuse boxes, air conditioning ducts are in case they impact on the space where kitchen cabinets and appliances will be going.

- Add doorways - measurements
- Windows - measurements
- Measure floor to ceiling height
- Location of existing plumbing/waste (if staying in same location)
- Location of existing oven, fridge & pantry (if staying in same location)
- Advise if you are keeping the existing flooring (to ensure same foot print)
- Label and reference walls, windows and items - a,b,c,d etc

Step 3

Most people already have an idea of the kind of kitchen shape they want.

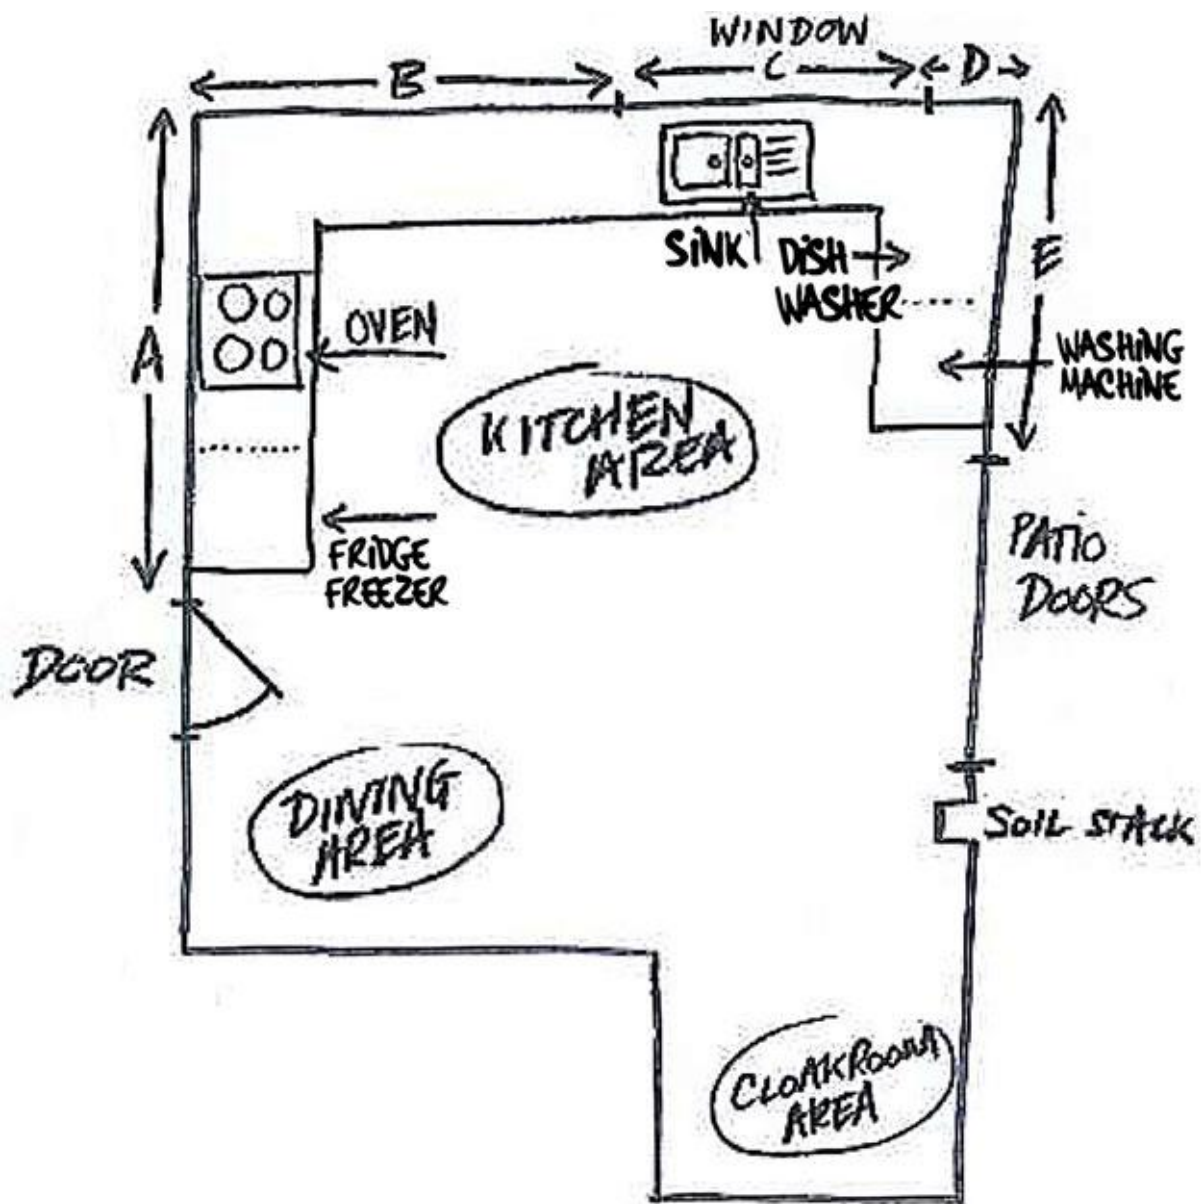

- Take a photo of your existing kitchen and send (if you can)
- Send images of kitchen ideas that you have seen on-line or magazines

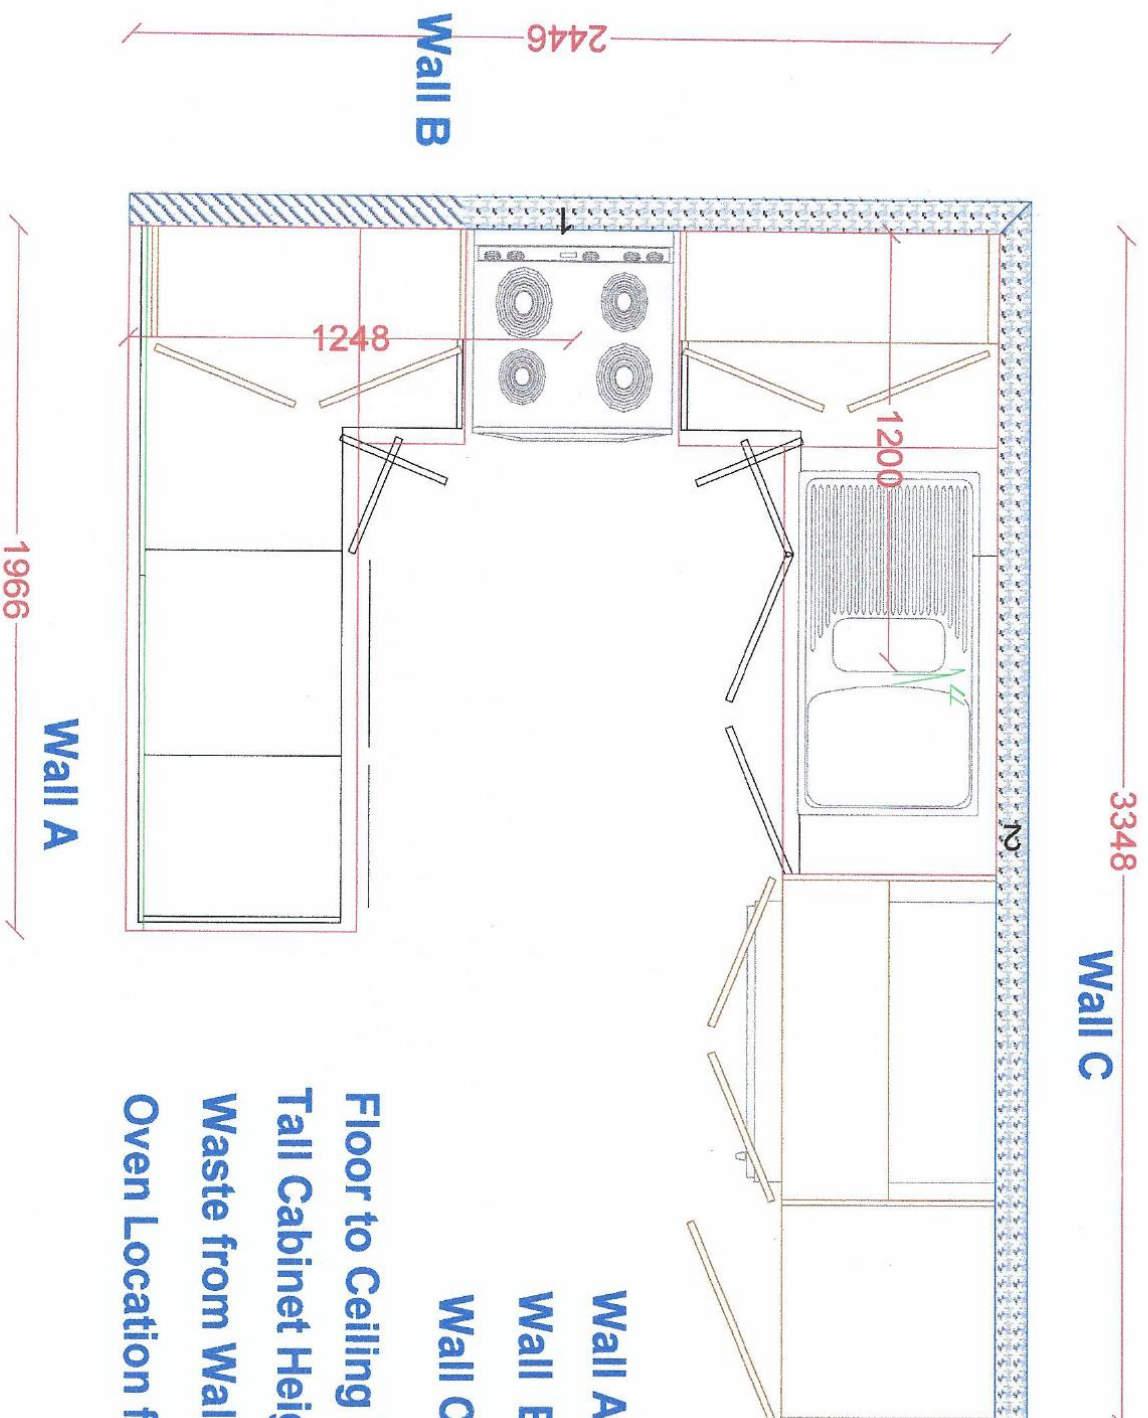

Remember this is just to get us started. We'll do our own, more thorough measuring at a later stage, if required, so don't panic if yours isn't millimetre perfect. Whether using millimetres or centimetres be consistent and use the same throughout.

Designer Consultation

During this time we offer phone consultations, one on one in house consultation, emails with 3d designs. We are working towards keeping you moving forward with your dreams, whilst adhering to current government health regulations.

- Discuss your needs and ideas around style and functionality
- Share the latest in international and local kitchen design trends
- Show you where to view colour options and samples
- Note your kitchen space and any special requirements

Wall A = 1966mm

Wall B = 2446mm

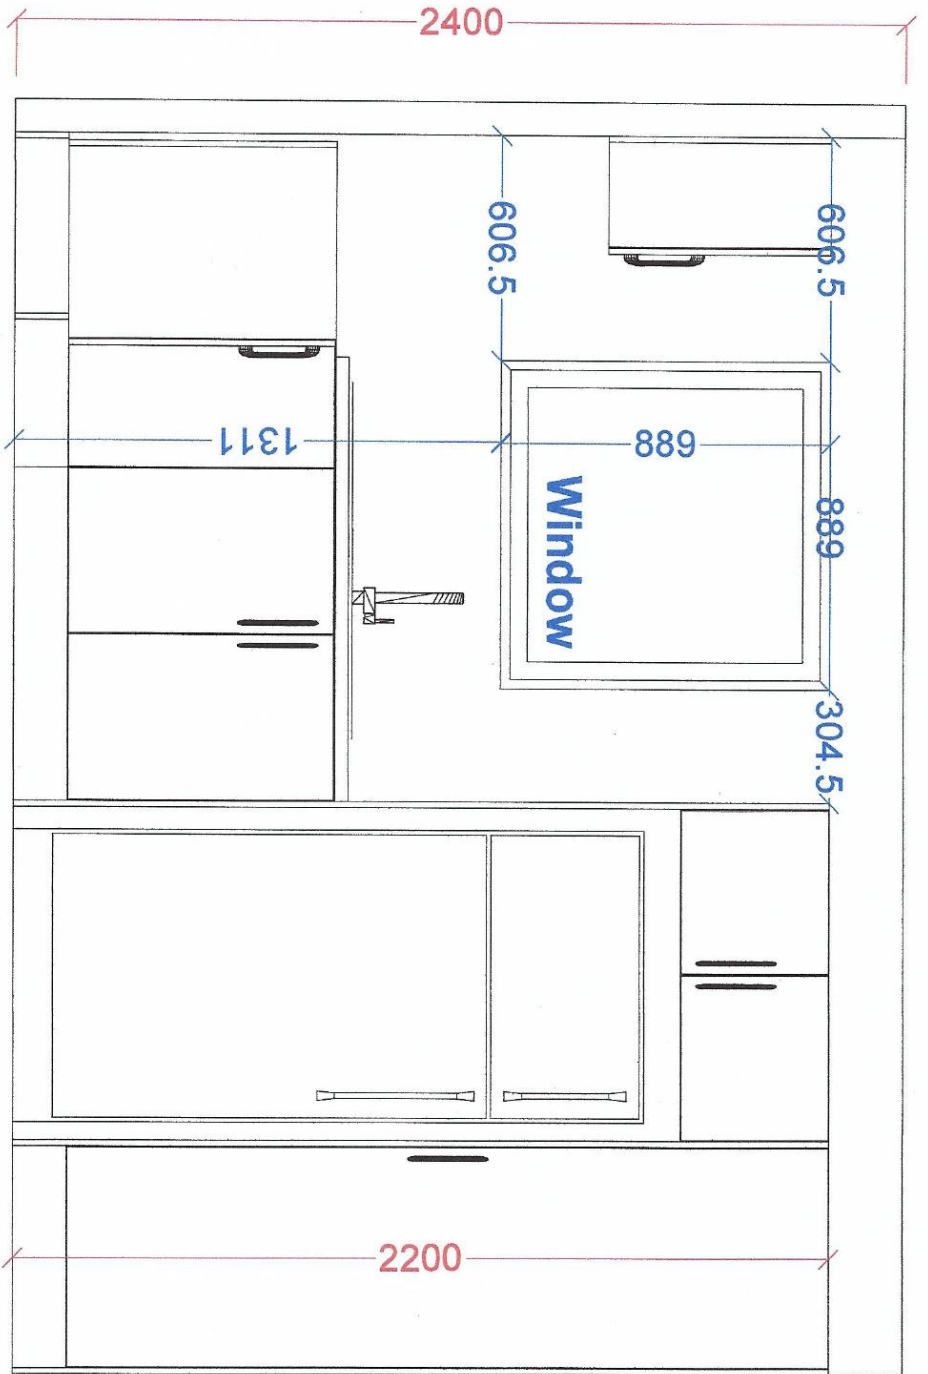

Wall C = 3348mm

Floor to Ceiling Height = 2400mm

Tall Cabinet Height = 2200mm

Waste from Wall B to Centre = 1200mm

Oven Location from Wall A = 1248mm

Window Location from Wall B = 606.5mm

Window Width = 889mm

Window Height = 1311mm

Window Floor to Bottom = 1311mm
